Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13 and 17-20, drawn to an ion implanter system and/or method for controlling an ion implanter system, classified in class 250, subclass 492.21.
- II. Claims 14-16, drawn to a method of detecting a particle level of an ion beam, classified in class 250, subclass 397.
- III. Claims 21-22, drawn to a computer product, classified in class 116, subclass 18.

The inventions are distinct, each from the other because:

Inventions I, II and III are distinct, each of the inventions I, II and III recites the limitations not recited in the other invention. The differing limitations make the inventions I, II and III patentably distinct from one another, i.e., a reference that anticipates or makes obvious one of the inventions I, II and III would not by itself anticipate or make obvious the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Mark Superko on 09-21-2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
